Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/688,837

Applicant(s)

YAMAMOTO ET AL.

Examiner

Michael P. Ferguson

Art Unit

3679

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 6 and 11-20 is/are pending in the application.
- 4a) Of the above claim(s) 11-20 is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 6 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 October 2000 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 04/21/04.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submission filed on June 9, 2004 has been entered.

2. Claims 11-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 12, 2002.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al. (US 5,520,269) in view of Uramoto et al. (US 4,642,011).

As to claim 6, Yamamoto et al. disclose a pin connection structure for use in a floating type brake disc assembly having:

a hub 2;

Art Unit: 3679

an annular disc **1** which is concentrically disposed around the hub with a clearance therebetween;

the hub and the disc having plural sets of semicircular connecting dents **6, 7** opening toward the clearance to thereby form respective inserting holes; and

a hollow pin **20** inserted into each of the inserting holes with a washer **21** fitted on an end portion **20d** of the hollow pin which is caulked radially outward for fixing the washer in position, an inner diameter portion of the end portion being only slightly expanded by caulking the hollow pin, and wherein the expansion does not exceed an outer diameter of a shank **20a** of the pin, and

wherein the hollow pin is formed (**subsequent to caulking**) into a rounded or arced convex shape in part of an inner periphery of the end portion (Figures 8(a) and 8(b)).

Applicant is reminded that **process limitations are given no patentable weight in product claims**. See MPEP § 2113. "The patentability of a product does not depend on its method of production." In re Thorpe, 777 F.2d 695,698,USPQ 964,966 (Fed.Cir.1985).

Yamamoto et al. fail to disclose a pin connection structure wherein the hollow pin is made of a metal having a surface-treated layer, wherein the metal is an aluminum alloy or a ferrous metal, wherein the surface-treated layer is an oxide corrosion-resistant film and one of chromium plating and nickel plating.

Uramoto et al. teach a fastener made of a metal having a surface-treated layer, wherein the metal is an aluminum alloy or a ferrous metal, wherein the surface-treated

Art Unit: 3679

layer is an oxide corrosion-resistant film and one of chromium plating and nickel plating, for preventing rust and corrosion of the fastener (column 1 line 62- column 2 line 23, column 5 lines 25- 61; column 6 lines 54- 68; and Table 7).

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify a pin connection as disclosed by Yamamoto et al. to have a hollow pin made of a metal having a surface-treated layer as taught by Uramoto et al. to prevent rusting and corrosion of the hollow pin.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al. in view of Uramoto et al. and Hufnagl et al. (US 4,331,041).

As to claim 6, Yamamoto et al. disclose a pin connection structure for use in a floating type brake disc assembly having:

a hub **2**;

an annular disc **1** which is concentrically disposed around the hub with a clearance therebetween;

the hub and the disc having plural sets of semicircular connecting dents **6, 7** opening toward the clearance to thereby form respective inserting holes; and

a hollow pin **20** inserted into each of the inserting holes with a washer **21** fitted on an end portion **20d** of the hollow pin which is caulked radially outward for fixing the washer in position, an inner diameter portion of the end portion being only slightly expanded by caulking the hollow pin, and wherein the expansion does not exceed an outer diameter of a shank **20a** of the pin (Figures 8(a) and 8(b)).

Applicant is reminded that **process limitations are given no patentable weight in product claims**. See MPEP § 2113. "The patentability of a product does not depend on its method of production." In re Thorpe, 777 F.2d 695,698,USPQ 964,966 (Fed.Cir.1985).

Yamamoto et al. fail to disclose a pin connection structure wherein a hollow pin made of a metal having a surface-treated layer, and wherein the hollow pin is formed in advance into a rounded or arced convex shape in part of an inner periphery of an end portion of the hollow pin, wherein the metal is an aluminum alloy or a ferrous metal, wherein the surface-treated layer is an oxide corrosion-resistant film and one of chromium plating and nickel plating.

Uramoto et al. teach a fastener made of a metal having a surface-treated layer, wherein the metal is an aluminum alloy or a ferrous metal, wherein the surface-treated layer is an oxide corrosion-resistant film and one of chromium plating and nickel plating, for preventing rust and corrosion of the fastener (column 1 line 62- column 2 line 23, column 5 lines 25- 61; column 6 lines 54- 68; and Table 7).

Hufnagl et al. teach a (partially) hollow pin **10** formed in advance into a rounded or arced convex shape **20** in part of an inner periphery of an end portion of the hollow pin; the convex shape providing for firmly joining two members without the main shank **14** of the pin expanding during the riveting process, such expansion causing structural failure in the joined members (Figure 1, column 1 lines 33-35, 48-64).

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify a pin connection as disclosed by Yamamoto

Art Unit: 3679

et al. to have a hollow pin made of a metal having a surface-treated layer as taught by Uramoto et al. to prevent rusting and corrosion of the hollow pin; and to be formed in advance into a rounded or arced convex shape in part of an inner periphery of an end portion of the hollow pin as taught by Hufnagl et al. to provide for firmly joining the hub and disk without the main shank of the hollow pin expanding during the riveting process, such expansion causing deformation and possible structural failure of the hub and disk material, and cracking in the surface-treated layer.

Response to Arguments

6. Applicants' arguments filed June 9, 2004 have been fully considered but they are not persuasive.

Attorney has submitted a detailed description of the prior art and of the claimed invention. However, Attorney has not provided any arguments as to the differences between the prior art and the claimed invention in regard to and in terms of the claimed limitations.

Applicant is reminded that process limitations are given no patentable weight in product claims. See MPEP § 2113. "The patentability of a product does not depend on its method of production. " In re Thorpe, 777 F.2d 695,698,USPQ 964,966 (Fed.Cir.1985).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael P. Ferguson whose telephone number is (703)308-8591. The examiner can normally be reached on M-F (7:30-4:30).

Art Unit: 3679

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola can be reached on (703)308-2686. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
